Site:
The site is located at the most strategic context in Mumbai. It was formerly an important storage space for goods, but now the harbor is shifted to JNPT on the opposite side of the city, which created a major node in the city.

Since the transfer of economy from industrial-based to service-based, the railway yards needed a new interpretation for the connection back to the city.

Sandhurst Road Rail Yard/Wadi Bunder creates an unique challenge to connect the city back to its seaside, thus creating a transition space for city to grow towards its harbor area.

The interesting topography of site and its existing infrastructure elements is not porous and act as a land-lock for the city.

The transformation of Mumbai is crucial and to think about the infrastructure up-gradation is essential part of the city.

The Site Topography and its infrastructure elements in relation to the surrounding:
