

MOBILITY AND FACILITIES

The graphs and the diagrams underline a lack of homogeneity in transport facilities: moving from the center of Barcelona to the cities of the Barcelona Metropolitan Region (RMB), the coverage of transport facilities decreases drastically. In addition, the location of the train stops (Renfe) serves only a part of the city, and they completely cut out the mountain municipalities (Cabriels, Vilassar de Dalt). Nevertheless, facilities in Vilassar de Mar are distributed quite unevenly, mainly along the Via Nacional and Avinguda de Montevideo, considered the main commercial routes.

1. Existing territorial railway coverage (1000m from the existing stations)

2. Vilassar de Mar rail transport coverage
