— A Cradle to Cradle City Transformation For Carrara

A CRADLE TO CRADLE PLANNING CONCEPT — TREE OF CARRARA

Four 100% to represent the stages of Carrara's future growth in the grand city tree. In the book Cradle to Cradle, we explore the complexity of a city tree. The crown tree has abundant flowers and fruit, but often neglects the surrounding environmental resources. When these flowers and fruit fall to the ground, the soil becomes depleted, the water, recycling, microorganisms, insects, plants, animals and soil & the developer of the city can take the by-life cycle of a tree, with the ability to metabolize, for the sustainable development of Carrara can be realized.

MARBLE WASTE RECYCLING AND STAGE PLANNING

We are presented with a different marble waste recycling approach for the same town. Through several different types of waste particles, different types of marble chips can have different processing methods, and can be used in different high-tech manufacturing industries through the processing. By recycling these marble waste materials to produce advanced aggregate and industrial transformation, we achieve sustainable development for Carrara. The goal is to promote the transformation of the city and create sustainable development opportunities for the city. In the process, it could solve the water pollution and flooding problems for the urban and its surrounding with water can contribute to a better urban environmental quality could also be improved.
