DEFINING AN ENCLOSE BETWEEN URBAN AND NATURE

Town and country must be clearly delineated from each other to have a functional identity. This happened naturally for ancient and medieval towns that needed a wall or body of water to defend themselves. The sense of enclosure is also important to the individual places within a town.

Artificial and nature are existing together on earth, they are different features with different characteristics. A good environment is a good relationship between human and nature, each of them supports each other. Architecture is one element which is created by human to improve their life quality. This intervention must be integrated not only to the nature but also to the prior existing elements.

And you. A windrose, a compass. My direction, my description of the world. - Ian Burgham -

Rules. The basic regulation to develop, extend or form types. All elements having same characteristic create a cluster where they can support each other. - Leaf texture -

A central square, from the Greek agora to the medieval European church grounds, needs a "frame for the street picture." It should be enclosed on all sides by buildings of an appropriate height, and the area itself should be appropriately sized according to the proportions of this visual frame. Expansive views and open space are always more preferable for public spaces.
