

First level: +2.5 m

Second level: +5.5 m

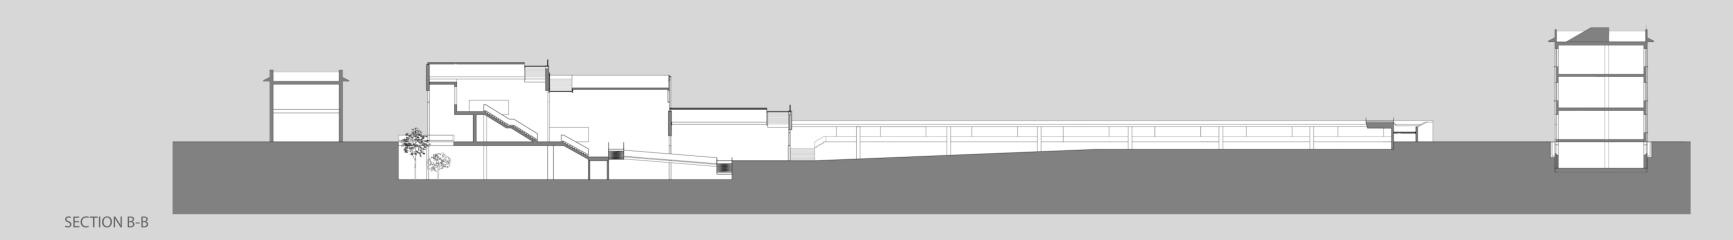

Fourth level : +11.5 m

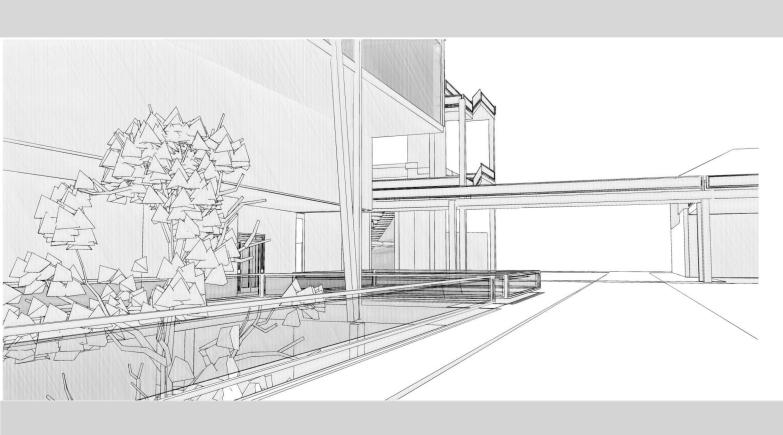

Third level : +8.5 m

The zigzagging roof of the building snakes around a plaza and forms a public square.
It seems one side of square rise from the ground and wraps up to the roof of the building and to the tower.
The ramps are designed to link the urban path on both sides of the project with the interior.
The urban path that is defined along the site, slowly converts itself into a tower. To reach the tower, a person is able to step up different level.

Project: Public square and a plaza for student with retails

The project concerns the development of public spaces. The site is bordered by 3 major roads and one secondary road; In the west (Durando street) and South (Alfieri street). Most people usually experience the site by driving or walking along street of Alfieri from Bovisa station and university. To the south, density of buildings gets higher.

A plaza for student, to the front of the university, is proposed to define the western edge of the public square.

This space aims at supporting the present and future activities of Bovisa.
