SECTION B-B

SECTION C-C

SECTION D-D

The MATERIALS PALLET is related with the colours of the natural elements (trees, river, crops) and it changes during the different seasons. Materials such as wood and steel will be the main materials for the elevated platform, which is going to be the connecting element between the rural and urban landscapes. In terms of sustainability, the materials proposed have a long lasting and recyclable life.

The main idea is to keep a strong relation between the natural and non-natural elements, in order to create a sensorial experience for the future users of the park. This also will help to make stronger the relation between the urban and the rural areas.
