

Slow-mobility connexion

The urban reading at large scale sets the strategy to link the three enclaves (from historical center, across project area, to Fidenza Village outlet) through a slow-mobility path. Starting point of the path, in historical center, is the Romanic cathedral.

Ecological connexion

The environmental reading at large scale defines the landscape approach of the multi-scale strategy.

The focus is on the natural system which arrives close to the North limit of the project site.

The proposal focuses on its development throughout a process of infiltration in order to link together the already present ecological corridors.

The territorial section shows the sequences -urban,semiurban,natural [agricultural]- from city center to shopping outlet.
