

Tehran, capital of Iran, is a city with different urban fabrics in different periods. In each period, there was some spaces working for the urban fabric, but these spaces do not have the enough potentiality for Tehran in 21 century. Our project area, is one of these spaces. Although it works for the city, it has the potentiality much more that what it is. Our propose, is to redevelop this area to give more services to the city and general publics.

The project area is the Cargo area located behind the Central train station in Tehran. The area, is a sort of post infrastructural area located between two different city fabric.
