

Restoration Process

Restoration Plan 1:20000

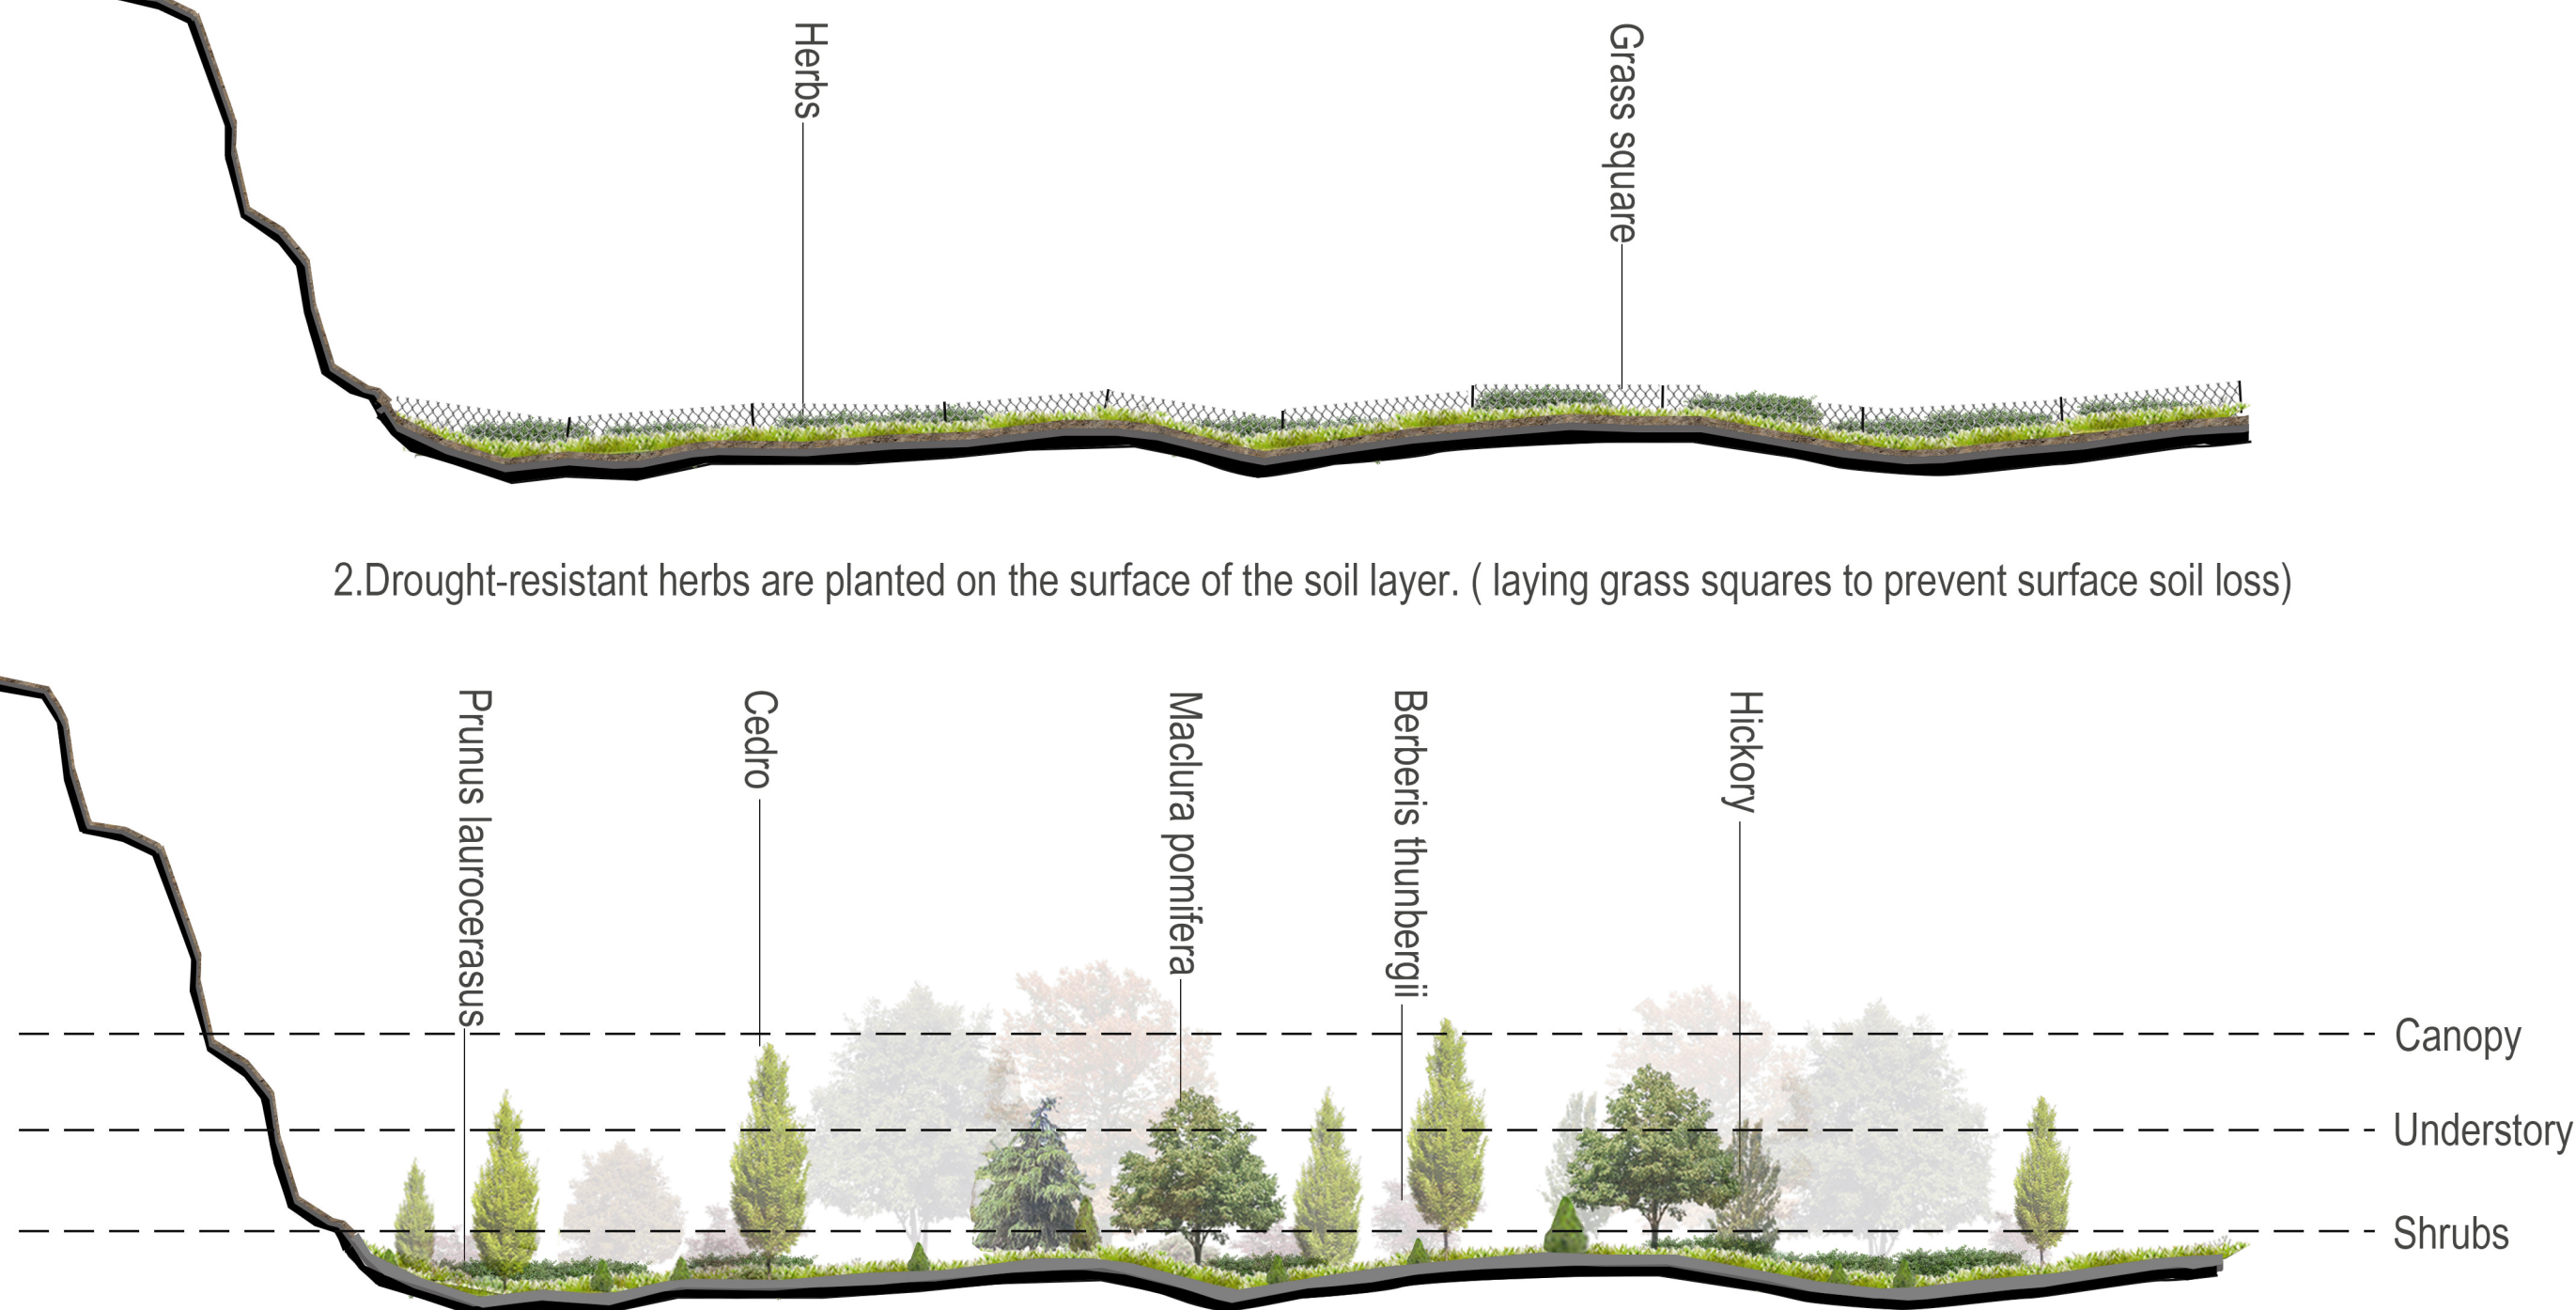

1. Repair the soil: add a layer of water-absorbent / water-retaining material, gravel, fine sand, and soil layer (15-30cm) on the surface of the bare rock.

Vegetation selection

2. Drought-resistant herbs are planted on the surface of the soil layer. (laying grass squares to prevent surface soil loss)

3. Based on the restoration of greening, other herbs and shrubs, or small trees are gradually planted.
