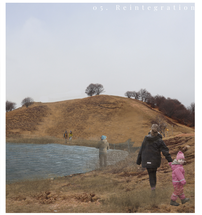
The top of Monte Mottarone has been the scene of many changes, especially during the last century. Monte Mottarone has seen the growth of tourism and sports activities in an increasing way, followed by the uncontrolled and confused construction of infrastructures related to wheel-transport sports facilities. Ample decreases in the number of snowfalls in the Mottarone area in today's climate make the maintenance of these structures inadequate to the times and climatic conditions, that defy the landscape of Monte Mottarone.
The effects of climate change are very evident in the area, for this reason the presence of chair lifts, ski lifts, ski slopes, and structures dedicated exclusively to winter sports seems almost anachronistic. The project therefore proposes a removal of the latter and a change in the landscape and tourist proposal of Monte Mottarone in view of a more sustainable

01. The car park transforms

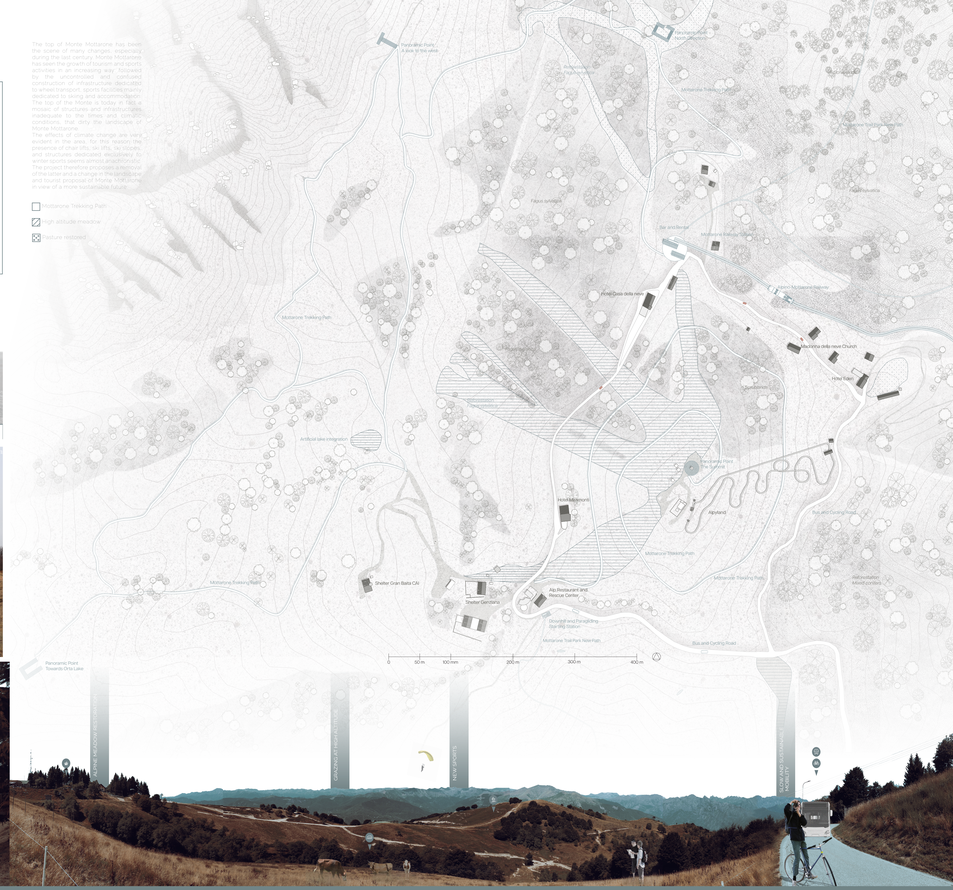
02. New life for ski slopes

03. The panorama opens up again

04. Trace



05. Reintegration

The top of Monte Mottarone has been the scene of many changes, especially during the last century. Massive tourism has seen the proliferation of sports facilities and the uncontrolled and confused construction of infrastructures and complexes related to wheel-transport sports facilities, mainly dedicated to skiing and alpine skiing.
The top of the Monte is today a mass of inactivated and infrastructures inadequate to the times and climatic conditions, that defy the landscape of Monte Mottarone.
The effects of climate change are very evident in the area, for this reason the presence of chair lifts, ski lifts, ski slopes and structures dedicated exclusively to winter sports seems almost anachronistic. The project therefore proposes a removal of the latter and a change in the landscape and tourist proposal of Monte Mottarone in view of a more sustainable


- Mottarone Trekking Path
- High altitude meadow
- Nature reserve
